

From the Earth

Carolina Ceramics Brick Company manufactures environmentally-friendly products that provide exceptional energy efficiency, durability, recyclability and low

maintenance for beautiful homes and

outstanding commercial buildings. Our manufacturing facilities meet or exceed

state and federal environmental

regulations, and we are committed to

always improving our manufacturing

process, thereby reducing environmental

impact. Efficient energy and resource use

is central to this objective. Renewable

energy and energy-conservation efforts reduce

the environmental consequences of Carolina Ceramics' manufacturing process.

If you would like to acquire a copy of Carolina Ceramics Brick Company's LEED Certification, please contact: carolinaceramics@carolinaceramics.com.

CAROLINA CERAMICS BRICK COMPANY'S EARTH-FRIENDLY PRACTICES INCLUDE:

- Using rainwater, run off water and recycled water in brickmaking
- Recycling clay and bricks that don't meet our quality standards
- Using high-efficiency, state-of-the-art natural gas kilns
- Recycling heat from kiln cooling zone to dry our brick
- Mining from land resources within 13 miles of our brick-making facility to save fuel
- Complete reclamation of clay mining lands

Our products are just as environmentally-friendly as our manufacturing practices. Brick is one of the greenest building materials available because:

- It's made from clay and shale, two of the most abundant natural resources.
- It requires no maintenance and lasts for thousands of years.
- It's an excellent insulator that conserves energy.
- It's fireproof, insectproof and water resistant.
- It's completely recyclable, biodegradable and does not emit VOCs.

When you choose Carolina Ceramics brick, you can feel good about our products and how we make them. Together, we can protect our environment for future generations.
